**DATA PLATFORMS ENGINEER | ANALYTICS | DATA GOVERNANCE | SECURE DATA SYSTEMS**

Data Engineer and Data Platform Lead with 6+ years of experience designing, implementing, and managing scalable data infrastructure and governed analytics platforms across multi-country operations. Experienced in building secure API-driven data pipelines, centralized data warehouses, and automated data quality and governance frameworks handling large-scale operational and sensitive datasets. Hands-on expertise in Python, SQL, Snowflake, Airflow, dbt, Docker, APIs, and cloud-based data environments, with strong focus on data reliability, access control, automation, and operational sustainability. Proven ability to work closely with technical and non-technical teams to deliver practical, well-documented data systems that support reporting, research, and strategic decision-making.

---

**CORE COMPETENCIES**

- |                                        |                                      |                                  |
|----------------------------------------|--------------------------------------|----------------------------------|
| • Data Engineering & Architecture      | • Data Integration ETL/ELT Processes | • Workflow Orchestration         |
| • Data Governance & Quality Management | • Data Platforms & Warehousing       | • Cross-functional collaboration |
| • Technical Documentation              | • Team Leadership                    | • Monitoring & Reliability       |
- 

**PROFESSIONAL EXPERIENCE**

---

**ONE ACRE FUND, NAIROBI, KENYA****DATA ENGINEERING MANAGER/LEAD DATA ENGINEER - JANUARY 2021 - MARCH 2026**

- Led a team of 3 engineers and a business analyst while remaining hands-on in designing data pipelines and platforms supporting 10+ countries and 400+ users.
- Scaled data infrastructure from a single-source system with a few million records to a multi-source platform managing 500M+ records and 5TB+ of data.
- Spearheaded modernization of the data stack (Snowflake, SQL Server, Airbyte, Dataiku, Superset), improving data accessibility and usability across the organization.
- Achieved 97% pipeline reliability by implementing orchestration (Airflow, dbt), monitoring, and incident response processes.
- Implemented automated data quality validation and monitoring (Dataiku, SODA), maintaining ~97% data quality compliance across critical datasets.
- Designed and implemented data governance practices including metadata management, documentation standards, role-based access controls, and secure handling of sensitive operational datasets.
- Led large-scale data migration initiatives (clients, loans, repayments), ensuring data integrity across multiple systems (Fineract, Odoo).
- Mentored team members and guided technical direction, fostering a culture of ownership, collaboration, and continuous improvement.
- Built ELT pipelines integrating APIs, operational databases, ERP, HR, and field systems into centralized analytics platforms.
- Partnered with business leaders to translate reporting and operational needs into scalable datasets, dashboards, and decision-support tools.

**DATA ENGINEER – IT ENGINEERING - JANUARY 2018 - DECEMBER 2020**

- Designed and implemented ETL/ELT pipelines ingesting data from APIs, databases, and operational systems into the data warehouse.
- Improved data availability and reporting timeliness by optimizing data flows and reducing refresh times.
- Built structured data models and reporting tables to support business intelligence and analytics use cases.
- Collaborated with BI analysts and product teams to deliver high-quality datasets aligned with business requirements.
- Supported transition from legacy SSIS-based workflows to modern, automated data pipelines with improved scalability and maintainability.

**FINANCE SYSTEMS DATA INTEGRATION INTERN, MARCH 2017 — AUGUST 2017**

- Developed ETL workflows to centralize and standardize data into the warehouse, improving accessibility for analytics teams.
- Optimized data structures through table flattening and view creation, improving query performance.

**PWC, BOSTON, UNITED STATES****ADVISORY INTERN - JUNE 2016- AUGUST 2016**

- Delivered technology consulting support to a healthcare client, assessing IT infrastructure and identifying improvement areas.
- Developed implementation strategies and project plans for integrating new systems.
- Analyzed KPIs and optimized reporting processes to improve decision-making.

**START INTERN - JUNE 2015 - AUGUST 2015**

- Supported audit and tax simulation projects, gaining exposure to financial and operational processes.
- Organized and migrated datasets to improve accessibility and accuracy for internal teams.

---

**TECHNICAL & PROJECT EXPERIENCE**

---

**TECHNICAL PROFICIENCIES:**

- Data Platforms & Warehousing: Snowflake, Dataiku, SQL Server
- Orchestration & Transformation: Airflow, Airbyte, dbt
- Data Integration: Airbyte, APIs, Webhooks, ETL/ELT pipelines
- Programming & Querying: Python, SQL, C#, Dart
- Data Quality & Monitoring: Soda
- BI & Visualization: Superset, PowerBI
- Cloud & Databases: Azure, AWS, PostgreSQL, NoSQL (MongoDB, Elasticsearch)
- Version Control & CI/CD: Git, GitHub

---

**EDUCATION AND CREDENTIALS**

---

**Bachelor of Science (B.Sc.) in Mathematics & Computer Science**

Brown University — 2017

---

**ADDITIONAL INFORMATION**

---

**Languages:** English, Swahili
